“Fumigant Marking Requirements”

May 21, 2009

name: Rob van Uffelen

organization: IMO Advies

comments: 1) The name of the gas used should be a recognized chemical name (no trade name) although trade name can be added in brackets. e.g. phoshine gas and not: Hydrogen phosphide, Phosphorated hydrogen, Phosphorus hydride, Phosphorus Trihydride, Celphos, Delicia; Detia etc 2) Only closed units should be allowed under fumigation. 3) Missing instruction to remove marking after cargo has been removed from the unit. 4) Wonder why no requirement is mentioned, for domestic moves, on how to deal with the residues. (They cause great risks when e.g. Phoshine tablets are used which are still reacting when being removed from the units.)
