## Hazardous Materials Incident Data

HMIS data for 2000 is distributed in three data files: 2000mat.dbf, 2000con.dbf, and 2000rmk.dbf. The number of records and file size for these files are:

<u>File Name</u>	<u>Number of Records</u>	<u>File Size</u>
2000mat.dbf	17,779	15.8 MB
2000con.dbf	26,246	7.9 MB
2000rmk.dbf	97,045	8.4 MB

For distribution, these files have been compressed with file compression software into three corresponding .zip files. The .zip files have also been converted into self-extracting files, which have an .exe extension.

### Windows Users:

Click on each .exe file to download it. Save the files in a new or empty directory on your local hard drive. Double-click each file (in Windows Explorer or My Computer) to extract the .dbf files.

### Macintosh Users:

Click on each .zip file to download it. Save the files in a new or empty directory on your local hard drive. Use any file compression utility that can read .zip files to access and extract the .dbf files.
